

Product Code . ILS-ELE-10632

Recycled Gas Engine Performance Program

Description

Today's engines have sophisticated microprocessor based algorithms that control engine performance. With the Variable Fault Feature, the instructor can use the switches to demonstrate the loss of circuits while the engine is running. Because of these technological changes, the automotive technician must understand each subsystem's unique role in operation as well as its interdependence with other components. Programs are designed to give practical troubleshooting experience with domestic and foreign car manufacturer's engines.
