

Product Code . ILS-WT-11475

Water Floc. & Disinfectant, Pdr

Description

General Description:

A two step product water purifier that includes a flocculent and a disinfectant (Chlorine).

Instructions for use:

The flocculation/ disinfection powder is used to purify turbid water in cases of emergency. The coagulant part of the powder will form floc and separate the contaminants in water that will settle to the bottom of the container. These contaminants include dirt, pesticides, and possibly some heavy metals.

The disinfecting part will release Chlorine in water that will kill the harmful micro-organisms. Enough residual Chlorine is left behind to ensure safe drinking water.

Specifications:

The powder comprises an approved flocculent that will initiate the coagulation and subsequent precipitation, and Chlorine for disinfection.

Residual Chlorine is left in the treated water to guard against subsequent contamination. The pre-measured powder is packed in sachet sufficient to purify 10 liters of water. The powder could have

other ingredients such as a buffer to maintain the pH, a polymer to promote coagulation, etc.
