

Product Code . ILS-E-11767

Neon Wand

Description

When held near a Van de Graaff generator, electromagnetic or high voltage source, the neon gas begins to ionize and the tube emits a bright orange glow.

Neon is the easiest gas to excite into emitting light.

This glass tube is filled with neon gas at a reduced pressure and is similar to a section of a neon sign.

This makes for a striking display in a darkened room. You can also use this Neon Wand with our Plasma Globe and the Electrostatic High-Voltage.

Contact jLab for your Educational School Science Lab Equipments. We are best educational lab equipments exporter, educational lab equipments manufacturers, educational lab equipments supplier, educational lab equipments suppliers, educational lab export, educational lab exporter in india.
