

Product Code . ILS-EAC-11803

Ohm's Law Experiment Kit

Description

This qualitative approach can be made more quantitative by adding an ammeter and voltmeter to the circuit.

The kit consists of a 450mm nichrome wire mounted on a wood base, a bulb, a socket, and alligator clip leads.

Demonstrate the relationship between voltage, current, and resistance using this kit and as a power source.

Students will gain a better understanding of Ohm's Law as they alter positions of clip leads along a nichrome wire and observe changes in the brightness of the attached bulb.

Contact jLab for your Educational School Science Lab Equipments. We are best scientific educational lab equipments, scientific equipments manufacturers, scientific lab equipment manufacturers, scientific lab plasticware, scientific laboratory equipment manufacturer, scientific laboratory equipment supplier in india.
